Outstanding reliability, availability, and serviceability (RAS) and high-efficiency design improve your business environment and help save operational costs.

Scalability and performance

The System x3650 M5 offers numerous features to boost performance, improve scalability, and reduce costs:

- Improves productivity by offering superior system performance with the Intel Xeon processor E5-2600 v4
 product family with up to 22-core processors, up to 55 MB of L3 cache, up to 2400 MHz memory
 speeds, and up to 9.6 GT/s QPI interconnect links.
 - Support for up to two processors, 44 cores, and 88 threads allows to maximize the concurrent execution of multithreaded applications.
 - Intelligent and adaptive system performance with energy efficient Intel Turbo Boost Technology allows CPU cores to run at maximum speeds during peak workloads by temporarily going beyond processor thermal design power (TDP).
 - Intel Hyper-Threading Technology boosts performance for multithreaded applications by enabling simultaneous multithreading within each processor core, up to two threads per core.
 - Intel Virtualization Technology integrates hardware-level virtualization hooks that allow operating system vendors to better utilize the hardware for virtualization workloads.

Note: Also available via CTO is the Intel Xeon processor E5-2600 v3 product family with up to 14-core processors, up to 35 MB of cache, up to 2133 MHz memory speeds, and up to 9.6 GT/s QPI interconnect links.

- Up to 2400 MHz memory speeds with two DIMMs per channel running at 2400 MHz to help maximize system performance.
- Up to 1.5 TB of memory capacity with 64 GB load-reduced DIMMs, or LRDIMMs
- The 12 Gbps SAS internal storage connectivity doubles the data transfer rate compared to 6 Gb SAS solutions to maximize performance of storage I/O-intensive applications.
- Flexible and scalable internal storage configurations provide up to 215 TB of storage capacity with 7.68 TB 2.5-inch solid-state drives (SSDs) in a 2U rack form factor.
- The use of SSDs instead of or along with traditional spinning HDDs can significantly improve I/O
 performance. An SSD can support a significantly higher number of I/O operations per second (IOPS) than
 a typical HDD.
- The server has four integrated Gigabit Ethernet ports and optional 10 Gb Ethernet ports with ML2 adapters.
- The server offers up to eight PCI Express (PCIe) 3.0 I/O expansion slots plus one dedicated PCIe 3.0 slot for an internal storage controller in a 2U rack form factor.
- With Intel Integrated I/O Technology, the PCI Express 3.0 controller is integrated into the Intel Xeon processor E5-2600 v4 product family. This helps to dramatically reduce I/O latency and increase overall system performance.

Availability and serviceability

The System x3650 M5 provides many features to simplify serviceability and increase system uptime:

- Tool-less cover removal provides easy access to upgrades and serviceable parts, such as processors, memory DIMMs, and adapter cards.
- The server offers hot-swap drives supporting RAID redundancy for data protection and greater system uptime.
- The server offers redundant hot-swap power supplies and hot-swap redundant fans to provide availability for business-critical applications.
- The new Next Gen light path diagnostics LCD display panel simplifies servicing, speeds up problem resolution, and helps improve system availability.
- Proactive Platform Alerts (including PFA and SMART alerts): Processors, voltage regulators, memory, internal storage (SAS/SATA HDDs and SSDs, NVMe SSDs, M.2 storage, flash storage adapters), fans, power supplies, RAID controllers, and server ambient and sub-component temperatures. Alerts can be surfaced through the system IMM to managers such as Lenovo XClarity Administrator, VMware vCenter, and Microsoft System Center. These proactive alerts let you take appropriate actions in advance of possible failure, thereby increasing server uptime and application availability.
- SSDs offer significantly better reliability than traditional mechanical HDDs for greater uptime.
- Built-in Integrated Management Module II (IMM2.1) continuously monitors system parameters, triggers alerts, and performs recovery actions in case of failure, to minimize downtime.
- Built-in diagnostics using Dynamic Systems Analysis (DSA) Preboot speeds up troubleshooting tasks to reduce service time.

Memory

The System x3650 M5 supports TruDDR4 memory. TruDDR4 memory uses the highest-quality components sourced from Tier 1 DRAM suppliers and only memory that meets strict requirements is selected. It is compatibility tested and tuned on every System x server to maximize performance and reliability.

TruDDR4 memory has a unique signature programmed into the DIMM, which enables System x servers to verify whether the memory installed is qualified and supported. Because TruDDR4 memory is authenticated, certain extended memory performance features can be enabled to extend performance over industry standards. From a service and support standpoint, System x memory automatically assumes the system's warranty, and service and support provided worldwide.

The System x3650 M5 supports up to 12 DIMMs with one processor and up to 24 DIMMs when two processors are installed. Each processor has four memory channels, and there are three DIMMs per channel.

The following rules apply when selecting the memory configuration:

- The server supports RDIMMs and LRDIMMs.
- Mixing different types of memory (RDIMMs and LRDIMMs) is not supported.
- All DIMMs in the server operate at the same speed, which is determined as the lowest value of:
 - Memory speed that is supported by the specific processor.
 - Memory speed for selected quantity of DIMMs per channel.

Note: Maximum memory speed can be achieved when Max performance mode is enabled in UEFI.

The following memory protection technologies are supported:

- ECC
- Chipkill (for x4-based memory DIMMs)
- Memory mirroring
- Memory rank sparing

Chipkill works only in independent channel mode (the default operational mode) and supports only x4-based memory DIMMs.

If memory mirroring is used, then DIMMs must be installed in pairs (a minimum of one pair per each processor), and both DIMMs in a pair must be identical in type and size.

If memory rank sparing is used, then a minimum of one quad-rank DIMM or two single-rank or dual-rank DIMMs must be installed per populated channel (the DIMMs do not need being identical). In rank sparing mode, one rank of a DIMM in each populated channel is reserved as spare memory. The size of a rank varies depending on the DIMMs installed.

Chipkill, memory mirroring, and memory rank sparing modes are mutually exclusive. Only one operational memory mode can be enabled on a server, and it is a system-wide setting.

System x engineering tested and validated system designs that support memory speeds beyond Intel memory specifications, which provides benefits for workloads that require memory speed and density. System x TruDDR4 memory is fully supported up to the rated speeds that are shown in the following table. Table cells highlighted with a gray background indicate when the DIMMs are allowed to operate at a higher speed than Intel specifications define.

 - The Rear 2.5" HDD Kit is installed in place of the PCle Riser Card 1, and PCle slots 1, 2 and 3 are not present. The kit includes special riser that provides PCle 3.0 x8 slot for the M1215 RAID controller that is dedicated to 2x 2.5-inch rear drives.
- 4x 2.5-inch rear drives (2x Rear 2x 2.5" HDD Kits) are supported on 2.5-inch hot-swap drive bay models only.
 - The first Rear 2.5" HDD Kit is installed in place of the PCle Riser Card 1, and PCle slots 1, 2 and 3 are not present.
 - The second Rear 2.5" HDD Kit is installed in place of the PCle Riser Card 2, and PCle slots 6, 7 and 8 are not present.
 - Each kit includes special riser that provides PCle 3.0 x8 slot for the M1215 RAID controller that is dedicated to 2x 2.5-inch rear drives.
- 2x 3.5-inch rear drives are supported on 3.5-inch hot-swap drive bay models only.
 - With 8x 3.5-inch HS drive bay models, the 2x 3.5-inch Rear HDD Kit is connected to a dedicated M1215 controller (Independent RAID).
 - With 12x 3.5-inch HS drive bay models, the 2x 3.5-inch Rear HDD Kit can be connected to a
 dedicated M1215 controller (Independent RAID) or SAS expander on the 12-drive backplane
 (Cascaded).
 - The Rear 3.5" HDD Kit is installed in place of PCle Riser Card 2; PCle slots 6, 7, and 8 are not present.
- For 8x 3.5-inch and 12x 3.5-inch drive bay models, either 1x Rear 2x 3.5" HDD Kit (Independent RAID) or 1x Rear 2x 2.5" HDD Kit (Independent RAID) can be used in the configuration, but not both.
- For 12x 3.5-inch drive bay models, either 1x Rear 2x 3.5" HDD Kit (Independent RAID) or 1x Rear 2x 3.5" HDD Kit (Cascaded) can be used in the configuration, but not both. If the Cascaded Kit is used, 1x Rear 2x 2.5" HDD Kit (Independent RAID) also can be used in the configuration.

[#] Each PCIe SSD Extender Adapter (PN 00ML997) provides connectivity for up to two PCIe SSDs, and each adapter occupies a PCIe slot. For factory configured models, two or four PCIe SSD Extender Adapters (FC AS95) must be included in the configuration. For field upgrades, the PCIe SSD Upgrade Kit (PN 00FK677) includes two PCIe SSD Extenders.

^{**} Requires the selection of 8x or 16x 2.5-in. hot-swap drive bays (with 16x 2.5-in. drive bays, the internal optical drive cannot be used)

^{##} Requires the selection of 8x 2.5-in. hot-swap drive bays.

^{***} Two drives in the 2x 3.5-inch Rear HDD Kit are connected to the SAS expander on the 12-drive backplane, that is, to the same storage controller as 12 drives on the front.

- NVMe PCIe SSDs are supported on 8x or 16x 2.5-inch SAS/SATA hot-swap drive bay models only.
 - With one processor, up to one NVMe PCle SDD Upgrade Kit is supported, and it requires one of the Riser 1 card options with PCle x8 slots:
 - For the Riser 1 options with 3x PCle x8 slots (part numbers 00KA519 or 00KA498), the PCle SSD extenders are supported in PCle slots 1 and 2.
 - For the Riser 1 options with 1x PCle x8 slot (part number 00KA489), the PCle SSD extenders are supported in PCle slots 3 and 4.
 - With two processors, up to two NVMe PCle SDD Upgrade Kits are supported, and they require a combination of the Riser 1 and Riser 2 card options with PCle x8 slots:
 - For the Riser 1 and Riser 2 options with 3x PCle x8 slots (part numbers 00KA519 [Riser 1] or 00KA498 [Riser 1 or Riser 2]), the PCle SSD extenders are supported in PCle slots 1 and 2 (Riser 1), and 6 and 7 (Riser 2).
 - For the Riser 1 and Riser 2 options with 1x PCle x8 slot (part number 00KA489), the PCle SSD extenders are supported in PCle slots 3, 4, 5, and 8.
 - For 16x 2.5-inch SAS/SATA hot-swap drive bay configurations, the internal optical drive is not supported in the configurations with NVMe PCle SSDs.
 - If only one NVMe PCle SSD Upgrade Kit is used in the configurations with two processors, up to one 2.5-inch Rear HDD Kit is supported. In other configurations with the NVMe PCle SSD Upgrade Kits, the 2.5-inch Rear HDD Kit cannot be used.

I/O expansion

The System x3650 M5 server supports up to nine PCle slots: one slot on the system planar that is dedicated for an internal storage controller, two regular PCle slots on the system planar, and up to six PCle slots with different riser cards installed into two riser sockets on the system planar (one riser socket supports installation of one riser card). The slot form factors are as follows:

- Slot 1: PCle 3.0 x16 or PCle 3.0 x8; full-height, full-length (PCle x16 slot is double-wide)
- Slot 2: PCle 3.0 x8; full-height, full-length (not present if the slot 1 is PCle x16)
- Slot 3: PCle 3.0 x8 or ML2; full-height, half-length
- Slot 4: PCle 3.0 x8; low profile (vertical slot on system planar)
- Slot 5: PCle 3.0 x8; low profile (vertical slot on system planar)
- Slot 6: PCle 3.0 x16 or PCle 3.0 x8; full-height, full-length (PCle x16 slot is double-wide)
- Slot 7: PCle 3.0 x8; full-height, full-length (not present if the slot 6 is PCle x16)
- Slot 8: PCle 3.0 x8: full-height, half-length
- Slot 9: PCle 3.0 x8 (dedicated for an internal RAID controller)

Notes:

- Slots 5, 6, 7, and 8 require the second processor to be installed.
- For customers who need three PCle 3.0 x16 slots in the System x3650 M5 for their specific workloads, a special base model 8871-AC3 that can be configured with 3x PCle 3.0 x16 slots (onboard slot 5 + slots 1 and 6 on the riser cards) is available via CTO (x-config only).

The locations of the PCIe slots are shown in the following figure.

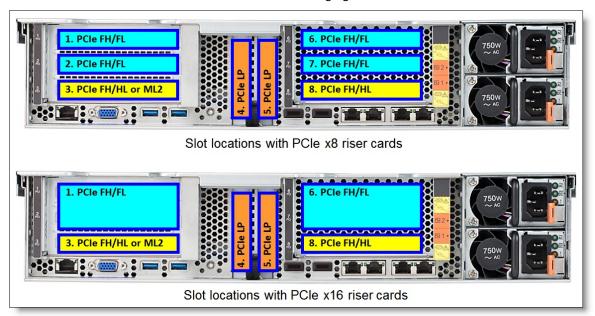

Figure 14. Slot locations

Riser 1 supplies slots 1, 2, and 3, and Riser 2 supplies slots 6, 7, and 8. The slots that are available for use depend on the number of riser cards that are installed and whether the second processor is installed, as shown in the following table.

Notes:

- PCIe x8 riser card part numbers are 00KA519 (Riser Card 1) and 00KA498 (Riser Card 1 or 2).
- PCle x16 riser card part numbers are 00KA504 (Riser Card 1) and 00KA489 (Riser Card 1 or 2).

Standard models do not include any riser cards. The following table lists available PCIe riser card options.

Table 19. PCIe riser cards and miscellaneous options

Description	Part number	Feature code	Maximum supported	
Riser 1 options (PCIe x8 riser supplies slots 1, 2 and 3; PCIe x16 riser supplies slots	1 and 3)

Serial port bracket				
COM Port Bracket	00KA161	A5AN	1	

Riser option part numbers 00KA489 and 00KA498 can be installed in both riser slots 1 and 2; for CTO or special bid orders these option part numbers have different feature codes depending on the riser slot into which they are installed.

The COM Port Bracket, part number 00KA161, is used for mounting the external serial port on the rear of the System x3650 M5. This option includes the bracket and the cable. The COM Port option is mounted in place of the PCle slot 5, and the PCle slot 5 cannot be used.

Network adapters

The System x3650 M5 supports four integrated Gigabit Ethernet ports. Optionally, the server supports ML2 adapters that are installed in the custom ML2 slot provided by the PCle ML2 riser cards (part numbers 00KA504 and 00KA519). This slot supports adapters with either two 10 Gb ports or four Gigabit Ethernet ports and supports direct connectivity to the IMM2.1 service processor for out-of-band systems management.

The integrated network interface controller (NIC) has the following features:

- A Broadcom BCM5719 chip
- Four Gigabit Ethernet ports
- NIC Teaming (load balancing and failover)
- Ethernet features:
 - Compliant with 1 Gb Ethernet IEEE 802.3, 802.3u, and 802.3ab PHY specifications

[#] The maximum quantity shown is with one processor / two processors (this does not apply to ML2 adapters). † Supported only in the PCIe 3.0 x16 slots supplied by the PCIe x16 riser cards (part numbers 00KA504 and 00KA489).

^{*} The adapter comes without transceivers or cables; for ordering transceivers or cables, see the configuration notes below the table. ‡ Slot 3 is supported only with the PCle x16 Riser 1 (feature code A5FN). Slot 8 is supported only with the PCle x16 Riser 2 (feature code A5R5).

[§] Not supported with the Intel Xeon processor E5-2600 v3 product family.

Configuration notes:

- ML2 network adapters are supported in the ML2 slot 1 supplied by one of the ML2 Riser Cards (part numbers 00KA504 and 00KA519).
- Unless otherwise specified in the table footnote for the specific adapter, PCle x4 and x8 Low Profile network adapters are supported in the low profile PCle x8 slots on the system board and full-high PCle x8 and x16 slots supplied by the riser cards 1 and 2.
- PCIe x8 full-height network adapters are supported in the full-height PCIe x8 and x16 slots supplied by the riser cards 1 and 2.
- PCIe x16 Low Profile network adapters are supported in the full-height PCIe x16 slots supplied by the riser cards 1 and 2.
- Some adapters require supported transceivers or DAC cables to be purchased for the adapter. The
 maximum number of transceivers or cables that are supported per adapter equals the quantity of the
 adapter ports, and all adapter ports must have the same type of the transceiver or cable selected.
 The following transceiver and cables can be purchased:
 - UTP cables for 10 GbE and 1 GbE RJ-45 adapters
 - Transceivers and cables for 10 GbE SFP+ adapters

Cooling

The System x3650 M5 server supports up to six system fans that provide dual fan zones cooling with N+1 fan redundancy, and each system fan has one or two rotors depending on the model. System x3650 M5 servers with single-rotor fans can be upgraded to dual-rotor fan systems by replacing the existing single-rotor fans and cage with the dual-rotor fans and cage by using the optional Dual Rotor Fan Thermal Kit (part number 00YD003).

Single rotor fan-based server models of the System x3650 M5 with one processor include four system fans, and server models with two processors include six system fans. Dual-rotor fan server models of the System x3650 M5 include six system fans.

The following table shows additional cooling options.

Table 34. Cooling options

System x3650 M5 Dual Rotor Fan Thermal Kit	00YD003	None	1
System x3650 M5 Passive GPU Thermal Kit	01GV396	None	1

Configuration notes:

- The PCIe thermal solution kit (part number 00MU908) is required if any of the ML2 adapters are present in the configuration. The PCIe thermal kit contains an air baffle.
- The Passive GPU Thermal Kit (part number 01GV396) is required when passively cooled GPU adapters (part numbers 7C57A02891, 7C57A02888, and 7X67A00068) are present in the configuration. The Passive GPU Thermal Kit contains an air duct, two low-profile heatsinks, four GPU power cables, and a full-length card holder.

General power supply rules are as follows:

- Minimum of 1 and maximum of 2 power supplies per system.
- If 2 are installed, power supplies must be identical.

Important: The Standalone Solution Configuration Tool (SSCT) and Lenovo Data Center Advisor and Configurator Tool (DCACT) power supply selection rules allow a subset of possible configurations due to power restrictions. Configurations that cannot be built in SSCT or DCACT due to power restrictions may still be supported. To verify support and ensure that the right power supply is chosen for optimal performance, you should always validate your server configuration using the latest version of the System x Power Configurator: https://support.lenovo.com/documents/LNVO-PWRCONF

The System x3650 M5 servers ship standard with or without a power cord (model dependent). The 900 W AC power supply option ships with one 2.8m, 13A/125V-10A/250V, IEC 320-C13 to C14 rack power cable (feature code 6400), and the other hot-swap AC power supply options ship standard with one 2.8m, 10A/100-250V, IEC 320-C13 to C14 rack power cable (feature code 6311).

^{*} Available via Configure to Order (CTO).

Configuration note: If the 900 W AC power supplies (00FK936) in the System x3650 M5 server are connected to a low-voltage power source (100 - 125 V), the only supported power cables are those that are rated above 10A; cables that are rated at 10A are not supported.

Integrated virtualization

The System x3650 M5 server supports VMware ESXi installed on a USB memory key or one or two SD cards in the SD Media Adapter. The USB memory key is installed in a USB socket inside the server. The SD Media Adapter is installed in a dedicated slot inside the server.

When only one SD card is installed in the SD Media Adapter, you can create up to 16 volumes, each of which is presented to UEFI as a bootable device. When two SD Media cards are inserted, volumes can be mirrored (RAID 1) across both cards, up to a total of eight mirrored volumes. The RAID functionality is handled internally by the SD Media Adapter.

The following table lists the virtualization option.

Systems management

The System x3650 M5 supports the following systems management tools:

- Integrated Management Module 2.1
- Light path diagnostics
- Lenovo ToolsCenter
- Lenovo XClarity Administrator
- Lenovo XClarity Energy Manager

Integrated Management Module 2.1

The System x3650 M5 server contains Integrated Management Module II (IMM2.1), which provides advanced service-processor control, monitoring, and an alerting function. If an environmental condition exceeds a threshold or if a system component fails, the IMM2.1 lights LEDs to help you diagnose the problem, records the error in the event log, and alerts you to the problem. Optionally, the IMM2.1 also provides a virtual presence capability for remote server management capabilities.

The IMM2.1 provides remote server management through industry-standard interfaces:

- Intelligent Platform Management Interface (IPMI) Version 2.0
- Simple Network Management Protocol (SNMP) Version 3
- Common Information Model (CIM)
- Web browser

The optional Integrated Management Module Advanced Upgrade is required to enable the remote presence and blue-screen capture features. The remote presence feature provides the following functions:

- Remotely viewing video with graphics resolutions up to 1600x1200 at 75 Hz with up to 23 bits per pixel
- Remotely accessing the server using the keyboard and mouse from a remote client
- Mapping the CD or DVD drive, diskette drive, and USB flash drive on a remote client, and mapping ISO and diskette image files as virtual drives that are available for use by the server
- Uploading a diskette image to the IMM memory and mapping it to the server as a virtual drive

The blue-screen capture feature captures the video display contents before the IMM2.1 restarts the server when the IMM2.1 detects an operating system hang condition. A system administrator can use the blue-screen capture to assist in determining the cause of the hang condition.

The following table lists the remote management option.

Table 38. Remote management option

Description	Part number	Feature code	Maximum supported
Integrated Management Module Advanced Upgrade	90Y3901	A1ML	1

Light path diagnostics

All System x3650 M5 server models include basic light path diagnostics, which provides the system LEDs on the front of the server (see Components and connectors) and the LEDs near the monitored components (for example, the DIMM error LED on the system board).

Server models with 8x 3.5-inch or 8x or 16x 2.5-inch front drive bays support a next-gen light path diagnostics LCD display panel (standard on 8x 3.5-inch models; available as an option for 8x or 16x 2.5-inch models). With LCD display, you have guick access to system status, firmware, network, and health information.

Storage dense server models (models with USB ports and system LEDs that are located on the right EIA bracket) with 8x or 16x 2.5-inch front drive bays that are upgradeable to 24x 2.5-inch front drive bays and models with 12x 3.5-inch front drive bays do not support an LCD display panel.

The following table shows the LCD display panel ordering information.

Table 39. Light path diagnostics options

Description	Part number	Feature code	Maximum supported
x3650 M5 Front IO Cage Adv. (3x USB, LCD, Optional Optical Drive)	00YD002*	None*	1

^{*} The Front IO Cage Advanced part number (00YD002) includes the Front IO Cage Standard (feature code ATE6), System x3650 M5 2.5" Bezel with LCD Light Path (feature code ATE8), and LCD display (feature code A4VH). If configured via CTO, the LCD display (feature code A4VH) is derived when the Front IO Cage Standard (feature code ATE6) and System x3650 M5 2.5" Bezel with LCD Light Path (feature code ATE8) are selected.

Lenovo ToolsCenter

Lenovo offers the following ToolsCenter software tools that can help you set up, use, and maintain the server at no additional cost:

- Lenovo ToolsCenter Suite
 - The ToolsCenter Suite tool is a consolidation of server management tools that helps simplify the management of System x servers. It provides functions to collect full system health information (including health status), configure system setting, update system firmware and drivers, and FoD mass activation key management for multiple endpoints.
- Lenovo ServerGuide
 The ServerGuide tool simplifies the process of configuring RAID and installing supported Microsoft Windows Server operating systems and device drivers on a System x server.
- Lenovo UpdateXpress System Packs
 The UpdateXpress System Packs (UXSPs) are integration-tested bundles that enable you to maintain
 your server firmware and device drivers up-to-date and help you avoid unnecessary server outages.
- Lenovo Dynamic System Analysis
 The Dynamic System Analysis (DSA) pre-boot or standalone diagnostics software speeds up troubleshooting tasks to reduce service time.

Lenovo XClarity Administrator

Lenovo XClarity is a centralized systems management solution that helps administrators deliver infrastructure faster. This solution integrates easily with Lenovo x86 rack servers, Flex System, and RackSwitch switches, providing automated agent-less discovery, monitoring, firmware updates, configuration management, and bare metal deployment of operating systems and hypervisors across multiple systems.

Lenovo XClarity Administrator is an optional software component for the System x3650 M5 which can be downloaded and used at no charge to discover and monitor the x3650 M5 and manage firmware upgrades for them.

If software support is required for Lenovo XClarity Administrator, or Lenovo XClarity Administrator premium features (such as configuration management and operating system deployment) are required, or both, Lenovo XClarity Pro software subscription should be ordered. Lenovo XClarity Pro is licensed on a per managed system basis, that is, each managed Lenovo system requires a license.

The following table lists the geo-specific Lenovo XClarity software license options.

YourDrive YourData

Lenovo's YourDrive YourData service is a multi-drive retention offering that ensures your data is always under your control, regardless of the number of drives that are installed in your Lenovo server. In the unlikely event of a drive failure, you retain possession of your drive while Lenovo replaces the failed drive part. Your data stays safely on your premises, in your hands. The YourDrive YourData service can be purchased in convenient bundles with Lenovo warranty upgrades and extensions.

• Microcode Support

Keeping microcode current helps prevent hardware failures and security exposure. There are two levels of service: analysis of the installed base and analysis and update where required. Offerings vary by country and can be bundled with other warranty upgrades and extensions.

• Enterprise Software Support

Lenovo Enterprise Server Software Support can help you troubleshoot your entire server software stack. Choose support for server operating systems from Microsoft, Red Hat, SUSE, and VMware; Microsoft server applications; or both operating systems and applications. Support staff can help answer troubleshooting and diagnostic questions, address product compatibility and interoperability issues, isolate causes of problems, report defects to software vendors, and more.

In addition, you can access hardware "how to" support for System x servers. Staff can help resolve hardware problems not covered under warranty, refer you to the right documentation and publications, provide corrective service information for known defects, and transfer you to a hardware support call center if needed.

Hardware Installation Services

Lenovo experts can seamlessly manage the physical installation of your server, storage, or networking hardware. Working at a time convenient for you (business hours or off shift), the technician will unpack and inspect the systems on your site, install options, mount in a rack cabinet, connect to power and network, check and update firmware to the latest levels, verify operation, and dispose of the packaging, allowing your team to focus on other priorities.
